Dynamic tests of BeSafe Pregnant

Two dynamics tests of BeSafe Pregnant has been performed 27 March 2001.

We hereby confirmed that we have tested the BeSafe Pregnant according to the test standards for car safety belts ECE R 16. By the dynamic tests BeSafe Pregnant keeps the hipster belts down at the pelvis and under the belly. On the specification test with a approved belt system and universal fix points, Besafe Pregnant does not have any negative influence to the support of the tested beltsystem.
